Work Experience

Data Analyst **Sep 2024 — Present**
Measurement & Evaluation Center, University of Houston *Houston, TX*

- Conducted exploratory and statistical analysis on university-wide course evaluation datasets covering 80,000+ records per semester, synthesizing findings into actionable insights supporting faculty evaluation and promotion processes across 15 colleges.
- Designed and deployed multi-level Tableau dashboards built on structured SQL data models via a .NET based university portal, enabling secure, role-based KPI visibility for academic leadership and stakeholders.
- Automated recurring report generation by extracting and transforming data through SQL-based pipelines and regenerating standardized Excel deliverables using Python, reducing manual reporting time by approximately **10–20%** (saving **2–4 hours per reporting cycle**) and enabling same-day reporting when required.
- Managed the full reporting lifecycle, including SQL-based data extraction, data integration, structured validation, and dashboard deployment, delivering both recurring and ad-hoc analytical reports.
- Implemented structured validation and reconciliation checks, reducing reporting discrepancies by approximately **20–40%** and cutting rework by **10–15%**, improving overall data reliability.

Financial Data & Systems Analyst **Sep 2021 — Jun 2024**
Variant Consulting Group Pvt. Ltd. *Kathmandu, Nepal*

- Analyzed key financial KPIs including revenue growth rate, operating margin, expense ratios, and budget variance across a $10M+ annual portfolio, supporting strategic planning and operational performance oversight across 5–8 concurrent business units.
- Identified cost variances of **8–10%** and controlled budget deviations within a **5–7%** range by proactively flagging overspending trends, enhancing operating margin visibility by **10–12%**.
- Reduced manual financial reporting effort and accelerated month-end reporting cycles by **1–2 days** through structured process improvements and standardized reporting frameworks, supporting fiscal year-end financial planning.
- Reduced reconciliation discrepancies by approximately **10–15%** through structured validation and cross-check procedures, improving overall reporting reliability.
- Performed structured data mining and variance analysis on financial datasets ranging from **50,000–200,000 records**, preparing executive-level summaries used by senior stakeholders for performance monitoring.

Projects

API-Driven Analytics Monitoring Systems | **Healthcare** · **Supply Chain**
Developed an API-driven healthcare analytics dashboard using **CDC NHSN Hospital capacity datasets** to monitor ICU utilization and respiratory admission trends, enabling near real-time visibility into hospital strain indicators.
Built a **global supply-chain pressure monitor** integrating GSCPI, freight rates, oil prices, and industrial production through automated API ingestion and cloud-based data pipelines.

Credit Risk Decision Support Pipeline | **GitHub**
Built a **Python and SQL analytics pipeline** for preprocessing and analyzing historical loan datasets, including data cleaning, feature engineering, and exploratory risk analysis.
Developed and evaluated **predictive default-risk models**, assessing performance using accuracy, precision-recall, and ROC-AUC to support data-driven credit decisions.

Physics-Informed Neural Network for Black–Scholes Option Pricing | **GitHub**
Developed a PyTorch-based **PINN** to solve the Black–Scholes PDE for European option pricing, enforcing boundary and payoff constraints via automatic differentiation, achieving **<1% error** versus analytical benchmarks and deploying an interactive **Streamlit** dashboard for financial scenario analysis.

Technical Skills

SQL & Data Analysis	Advanced SQL (joins, CTEs, window functions, query optimization), relational data modeling, data mining, exploratory and statistical analysis, KPI development and variance analysis
Data Engineering & Validation	ETL workflows, data cleaning and preprocessing, reconciliation procedures, data validation and quality assurance, reporting automation
Analytics & Forecasting	Regression modelling, classification methods, Time-series analysis, regression modeling, budget forecasting, trend analysis, performance monitoring
Visualization & Reporting	Tableau (dashboard deployment), Power BI, Excel (advanced formulas, PivotTables, INDEX/MATCH), VBA, executive reporting, data storytelling and insight communication
Programming & Tools	Python, R, Git, Jupyter Notebook, VS Code

Education

Master of Science in Engineering Data Science, *University of Houston* May 2026
Master of Business Studies, *Tribhuvan University* Sep 2021
